

# **Now Year-Round:**

## **Outdoor watering is prohibited *year round* from 10 a.m. to 6 p.m.**

Arlington has extended the time of day irrigation requirements for lawns and landscapes. Except for hand watering and soaker hoses, it is unlawful for a person to water, or cause the irrigation or watering of any landscape between the hours of 10 a.m. and 6 p.m. throughout the year.

Watering during the cooler parts of the day will save water and money. Watering during the hottest part of the day results in significant water loss to evaporation.

# **Rain and Freeze Sensors Save Water and Money**

Rain and freeze sensors are automated devices that stop irrigation systems from operating during icy weather conditions and during or immediately after rainfall.

City ordinance requires all residential irrigation sprinkler systems installed on or after January 1, 2007 to be equipped with rain and freeze sensors, and all commercial and apartment landscape irrigation systems to be equipped with rain and freeze sensors.

## **Save Water and Money with Low Water Use Landscaping**

Did you know that you could save up to 50% on your water bill by replacing a portion of your lawn with low-water-use landscaping?

Plants, trees and grasses that are native to North Central Texas region are drought tolerant and have lower water requirements than other types of landscape plants. Design your landscape with native plants and learn how to water efficiently and effectively to conserve water.
